# Delivering Excellence

### 3 LEVELS OF SECURITY

Get the right fraud protection with 3 levels of security.

- *Essential* – standard, affordable security for businesses with a low risk of check fraud
- *Classic* – extra protection with checks that are more difficult to replicate or manipulate
- *Premier* – sophisticated blend of security features for the highest level of protection

### COUNTLESS OPTIONS

- Dozens of color and background combinations
- Formats that work with nearly every accounting software
- Logos for preprinted checks
- Extra services such as automatic shipment scheduling, reverse numbering, special packaging and more

# 3 Security Levels Deliver the Right Fraud Protection

Choose **Essential**, **Classic** or **Premier** check stock for the level of fraud protection you need.

All check stock is constructed of high-quality, bank-recommended 24# paper. All checks include the required 5/8" clear zone as well as a target box for accurate MICR line placement.

## CHECK SECURITY AND FEATURES EXPLAINED

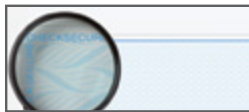

### WARNING BOX

Area on the check back that lists the security features included for quick verification.

### VOID PANTOGRAPH

Displays when checks are photocopied or scanned on most machines.

### MICROPRINTING

Text is printed at  $\frac{1}{100}$  inch so it appears as a line, but can be verified with a magnifying glass. If scanned or photocopied, the line will look solid.

### ARTIFICIAL WATERMARK

A watermark image is printed on the paper and is visible when viewed at an angle.

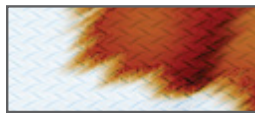

### TRUE WATERMARK

A true watermark is placed in the paper fibers at the time the paper is manufactured. View by holding up to a light source.

### FLUORESCENT FIBERS

Fibers embedded in the sheet are visible only under ultraviolet light.

### CHEMICAL PROTECTION

Chemicals in the paper react when bleach or other solvents are used to change the check.

### PRISMATIC PANTOGRAPH

Checks are printed with graduated colors which are the most difficult types of checks to photocopy or scan.

### THERMOCHROMATIC INK

Heat sensitive ink block will fade and reappear when held between thumb and finger or breathed on.

### ORIGINAL DOCUMENT BACKER

Light grey printing on the back disappears when photocopied.

### TONER ADHESION

Causes toner to bond permanently to paper. Attempts to remove information causes paper to tear.

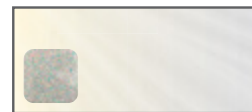

### COIN REACTIVE

Invisible layer on back of check changes color when rubbed with a coin.

### MOBILE DEPOSIT

A check box indicating selection of the mobile deposit feature is available on the back of each check.

### HOLOGRAM

A photographic technique used to create a multi-dimensional image on a foil seal which is fused to the check stock.

### PADLOCK ICON

Alerts to security features listed on the back.

# Efficiently Process a Large Volume of Checks with Pressure Seal

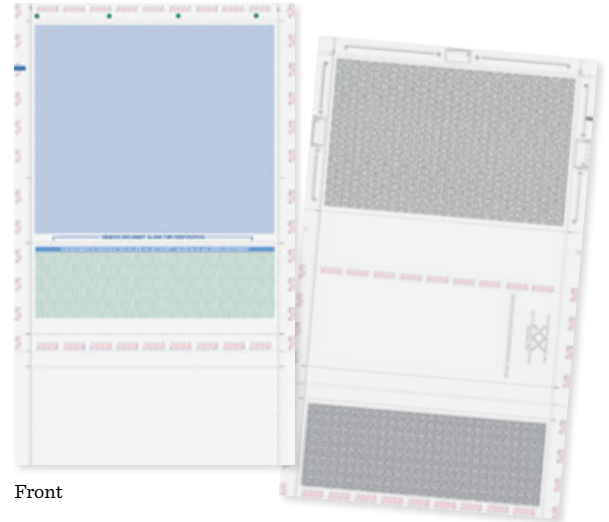

## PRESSURE SEAL CHECKS

Print checks on special blank security stock that has glue along the edges. Then, fold and seal the check with pressure seal equipment for easy mailing. Pressure seal checks are best for a large volume of checks for multiple accounts. It is critical to ensure compatibility with your accounting software (so data prints in the right locations), and pressure seal equipment (so the glue pattern aligns for proper sealing). **Request free samples!**

**Minimum quantity 500.**
